

Getting started with Animation

In this instruction sheet, I will guide you step by step in the use of Tupi animation software.

First you need to get a copy of the software on your device.. To do this, visit the Tupi site [www.tupitube.com] and click on the downloads button. The screen shown on the right should appear. I chose desk as I will be using on a computer.

This offers a choice of operating systems, I chose Windows Installer.

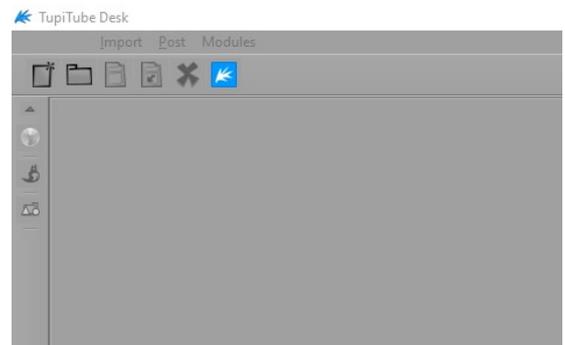

Then EXE installer. Follow the prompts and Tupitube will be installed on your device.

To open the software, click on the Tupitube icon.

The grey screen that opens is a little off putting and certainly not intuitive. I have just screenshot the top left hand corner Where the various tool are.

From the File menu, choose New Project. I changed the information in the Project Name, Author and description boxes as shown. You can do the same or leave as default.

At this stage, I suggest you do not change anything else.

Next, click on the tick as shown by the green arrow.
